

COLLABORATION

Calling All Plant Researchers, Artists and Plant Lovers!

An instrument
that gives sound
to plant perception

Since the 1970s, Damanhur—a resilient Federation of Communities with its own constitution, culture, art, music, currency, schools and uses of science and technology (www.damanhur.org)—has been researching communication with the plant world. As part of this research, they created instruments that are able to capture the electromagnetic variations of the surface of plant leaves and their root systems, and turn them into sounds and movement. After years of research, thanks to a partnership between Devodama and Solerà, the *Music of the Plants* U1 is now publicly available. If you find yourself in a country where there is no vendor, please contact us directly to purchase a device or become a distributor.

Science increasingly supports the concept that plants and trees operate with an innate intelligence and logic diverse from our own. *Music of the Plants* allows people around the world to connect with this intelligence.

Doing so encourages people to go beyond traditional ways of thinking and expand their awareness of how they relate to plants, trees and nature in general. Through passion, research and dedication, *Music of the Plants* has become a leader in the area of education on plant intelligence, but we do not stop there. Extensive research continues today as we become increasingly conscious of the innate ability of nature to communicate with us when we have the tools to listen. *Music of the Plants* would like to collaborate with you to fully understand the benefits of plant music and to decipher their musical language. We encourage you to Research, Experiment and Share your Experiences with us!

Crystal Herbs

U.K. Distributor for the Music of the Plants

A NEW WAY TO CONNECT WITH THE PLANT WORLD

Nature is all around! You see trees in the park and water your houseplants, but how connected are you really to the plant world? What if you could actually dialog with plants and trees? Researchers from Daamanhur began pondering this question forty years ago when they began experimenting with plant communication. As technology improved and knowledge about plant communication grew, Damanhur had an idea to create a device that would enable plants to create sound.

We expected the plants to produce random music, a bunch of notes loosely put together, but what happened next was beyond our expectations: we started to hear patterns. With more practice time, plants began to harmonize these patterns into musical scales, which transformed into melodies. These weren't random sounds but rather the conscious musical expression of plants and trees.

Today, thanks to a collaboration between Damanhur, Devodama and Solerà, the *Music of the Plants* device is available around the world to anyone who wants to personally experience this direct communication with plants using the universal language of music. The magic of *Music of the Plants* touches people in a profound way that cannot be conveyed in words. You must hear and feel this memorable encounter with nature for yourself.

Permanent and Temporary Installations

When the public encounters a plant musician, they connect to nature in a way never before imagined. The realization that plants and trees can actually interact through music is both moving and sparks a new level of discussion about the consciousness of nature. By featuring Music of the Plants in an artistic or public installation, you will also be educating people on what is necessary to create a sustainable society.

Enhanced Wellness and Recovery

Science shows us that being around plants and trees, both indoors and outdoors, significantly improves our physical, mental and emotional well being. Doctors and holistic health practitioners alike are actively researching the effects of the Music of the Plants in numerous settings—including home, hospitals and the workplace—to better understand how plant music shortens recovery time and aids in overall healing.

Personal Contact with Plant Consciousness

Contact with plant intelligence provides deeper insight into ourselves and the world around us. Studies show that plants in homes and workplaces help to reduce stress, increase productivity, enhance employee attitudes, lower operating costs and improve air quality. A personal connection to nature inspires us to create a world where the environment doesn't need protecting because it is an integral part of who and what we are.

Plants and Students: Friends for Life

Music of the Plants explores and illustrates the fundamental tenet that all life is connected. By providing a practical experience of plant intelligence, students from young to old can perceive the intricate relationships between humans and nature, ushering in a new era of respect for our environment. You will never forget the moment you are finally able to hear the invisible sounds of nature.
